

Tester Name: Mehreen Iftikhar Testing website: Digttech Offerings		URL: https://digttech-offerings-185302913428.asia-south1.run.app/index.html				
		Execution Date 19/5/2026 Version(0.0.1)				
HOME PAGE						
	Test Scenario	Expected Result	Status	Remarks	Evidence	Suggestions
	Verify the loading time and overall rendering of the Home Page elements.	The home page should load completely within 3 seconds without layout shifts or broken elements.	PASS	Working Fine.		
	Verify global navigation links functionality Home, Services, About Us, Clients, Contact Us.	Clicking any navigation link should smoothly scroll or redirect the user to the correct page/section.	PASS	Working Fine.		
	Verify the dynamic behavior and active highlight state of navigation links.	The current page link in the header should clearly change its color or state to highlight where the user is.	PASS	Working Fine.		
	Text Alignment & Spacing: Verify the typography, spacing, and alignment of the bottom feature text list.	The bottom text rows should have proper vertical spacing, and words like AI-first Automation must have correct spaces in between.	FAIL	Not Working Fine.	https://www.loom.com/4/48099cd056954575985a4abd22751c15	
	CTA Buttons Layout Verify that the primary action buttons and links are properly positioned without overlapping.	All buttons EXPLORE SERVICES, START A PROJECT and text links should have clean margins and must not overlap or touch each other.	FAIL	Not Working Fine.	https://www.loom.com/3/b1805412360qd2609a684f2653370041	
	Verify text formatting, layout alignment, and word spacing within the 'Why Digttech' section.	If feature headings Discovery, Design, Build, Launch should display clean line-height spacing, proper list indentation, and correct empty spaces between words.	FAIL	Not Working Fine.	https://loom.com/6/5587ad049f094b6fba35b45ce655ca51	
	Verify the layout alignment, text readability, and step sequence inside the HOW IT WORKS section.	All 5 process steps (01 to 05) should be perfectly aligned horizontally, the connecting timeline line should be straight, and descriptions must be clearly readable without text overlap.	PASS	Working Fine.		
	Verify the interactivity and layout alignment of the 5-step process timeline.	The timeline layout should display all 5 steps sequentially, cleanly aligned, and visually stable.	PASS	Working Fine.		
	Verify layout positioning, alignment, and spacing of the operational service domains text list.	The vertical list of categories should be center-aligned or evenly grid distributed across the page with proper line height spacing and margins.	FAIL	Not Working Fine.	https://www.loom.com/3/0ac24bd80bc74ad38d43c8900d12a76a	Convert the current single-column vertical list into a responsive 2-Column or 3-Column Grid Layout. Introduce clean, custom icons or interactive bullet points (matching the purple brand identity) next to each service domain, featuring a subtle glow effect on mouse hover. This will effectively eliminate the excessive blank space on the right side and significantly enhance content scannability and readability.
	Footer Conversion Card: Verify the structural layout and primary buttons inside the conversion card container.	The purple call-out card, headings, and CTA buttons must align correctly with distinct padding gaps.	PASS	Working Fine.		
	Global Footer Columns: Verify text alignment, column distribution, and links grouping in the bottom footer.	Services, Company, and Contact info grids must align symmetrically, and the copyright text must state 2026.	PASS	Working Fine.		Add a Smooth Slide-in Underline effect or dynamic glow effect when a user hovers their mouse over the footer hyper-links (Web Development, About Us, etc.) to make it feel more interactive.
	Core Home Route Mobile Responsiveness	Scaling the device context down to absolute mini viewport width matrices (e.g., iPhone 14 Pro Max) must lock horizontal scrolling and reveal a clean native navigation burger component trigger item.	PASS	Working Fine.		None. The viewport grid bounds are securely implemented on the root path layout tree.
GET STARTED		START A PROJECT				
	Empty Mandatory Fields	The wizard must block progression to Step 2 and show clear validation highlights under empty required inputs.	PASS	Working Fine.		The validation is working fine as a functional element.
	Invalid Email Syntax	Entering an invalid email format (e.g., without '@' or domain) must be caught by system validation.	PASS	Working Fine.		Add real-time syntax checking so the user gets an instant warning while typing instead of after clicking the button.
	Name Field Data Type	The 'First Name' box should only accept alphabetical letters and reject numeric values.	FAIL	Not Working Fine.	https://www.loom.com/0/0c003c2036c24c3682b3649b1855c5dc	Enforce a strict regex configuration to restrict numbers and special characters from being typed in name boxes entirely.
	Verify character acceptance and length constraints for the Company input field.	The field should accept generic alphanumeric company names and strings with minimum character thresholds.	PASS	Working Fine.		Add a subtle placeholder helper text like e.g., Digttech inside the field box to give better context to corporate clients
	Verify input masking and syntax character validation for the Phone (Optional) field	The field should strictly reject special symbols '+' typed at the end of the input string and enforce phone number syntax rules.	FAIL	Not Working Fine.	https://www.loom.com/share/fc58c5f93114cefa8471c577c8b88	Implement an automatic numeric input mask that restricts the '+' key entirely except at the very first index position, or add a real-time regex validator
	Project Type Tags Selection	The budget/service tags AI, ML, Cloud, Web, Mobile should be interactive and selectable by the user.	FAIL	Not Working Fine.	https://www.loom.com/share/ce1de55cc5854824ac845abc070ff107	Convert these static tags into Interactive Toggle Buttons or Checkboxes with a purple active highlight state when selected.
	Project Budget Dropdown	Clicking the budget dropdown must display a clean, readable list of financial tiers and allow seamless selection.	PASS	Working Fine.		
	Project Description Input	The description textarea must accept alphanumeric inputs, special characters, and enforce a maximum character length limit.	PASS	Working Fine.		
	Project Description Input	The description textarea must accept alphanumeric inputs, special characters, and handle long content strings safely.	PASS	Working Fine.		The field works fine, but a dynamic live character indicator e.g., 0 / 500) should be visible to control input data flow.
	Modal Scroll & Header Scaling	Text expansion inside lower inputs must not distort or crop the layout of preceding elements in the wizard.	FAIL	Not Working Fine.	https://www.loom.com/5/c27e04d59774658b25a1753761c9fa	Implement a strict overflow-y configuration or permanent height constraint for the inner wizard frame to isolate field sizing variables.
	Budget Range Slider Interactivity	Dragging or clicking the range slider must dynamically update the text threshold value (e.g., \$10K–\$20K) displayed above it.	PASS	Working Fine.		Add small vertical tick marks on the slider bar exactly above the currency indicators (\$10K, \$25K) for easier plotting.
	Timeline Blocks Selection Logic	The timeline blocks (ASAP, 1-3 Months, etc.) must operate as radio items; selecting one must highlight it and deselect the others.	PASS	Working Fine.		Proposed Business Logic Bug/Improvement: Integrate a dynamic pricing multiplier based on the selected timeline. For instance, choosing the 'ASAP' (Under 4 weeks) block should automatically apply a premium multiplier (e.g., +20% to +30%) to the Estimated Budget range slider text, reflecting urgent delivery pricing logic to the client in real-time.
	How Did You Hear About Us Dropdown	Clicking the reference channel dropdown must expand a readable, functional select option list overlay.	PASS	Working Fine.		

	Verify dynamic budget calculation adjustment based on preferred project timeline selector.	Selecting an urgent timeline (e.g., 'ASAP' / Under 4 weeks') should dynamically scale or apply a premium increase to the Estimated Budget range display.	FAIL	Not Working Fine.	https://www.loom.com/share/83fdb1b2c55649b1865d4d076c2978b7	Integrate a standard dynamic pricing multiplier configuration (e.g., +25% for ASAP) in the frontend controller state to reflect urgency-based costing model rules instantly to the lead.
	Verify the smoothness, transition easing, and dynamic positioning of the custom purple cursor follower container.	The inner dot must snap perfectly to mouse coordinate matrix paths, and the outer circle should fluidly follow with a slight easing transition delay without stuttering.	PASS	Working Fine.		Add a feature where the outer ring dynamically expands in radius and changes opacity when hovering over interactive components like CTA buttons or links to provide enhanced visual feedback.
	Verify Boundary Value Analysis (BVA) mapping and step increments for the Estimated Budget range slider	The slider must accurately cycle through all defined financial tiers \$1K-\$5K, \$5K-\$10K, up to \$500K step by step without skipping intervals.	PASS	Working Fine.		Add subtle textual markers directly beneath the slider track for major steps (e.g., \$10K, \$50K, \$200K) so users don't have to guess the node positions.
	Submit Project Action Execution	Clicking the green 'SUBMIT PROJECT' button with valid datasets must fire the API call and display a clear summary success state.	PASS	Working Fine.		
	Schedule a Call					
	Modal Form Session Reset	Reopening the 'Get Started' modal after closing a successful submission must completely reset the form state to a fresh, blank template.	FAIL	Not Working Fine.	https://www.loom.com/share/h75a0d4a0a054b97b025fbc36f33a2cb	Implement an explicit state reset handler (form.reset()) or hook clearing trigger) bound directly to the modal's Close button event listener.
	Custom Cursor Follower Animation	The cursor follower should move synchronously with the mouse pointer to provide a clean and smooth navigation experience.	FAIL	Not Working Fine.	https://www.loom.com/share/0c078cd184ad4cb2a6d79825dd69cddd	Disable or reduce the lag delay: The transition easing duration should be set to near-instantaneous or completely unified with the native mouse pointer to remove the distracting trailing effect.
	Verify tab switching navigation functionality (Schedule a Call / Partnership) post successful form submission	Clicking alternative tabs after a successful submission must immediately clear the success view and render the respective calendar or partnership input form layouts.	FAIL	Not Working Fine.	https://www.loom.com/share/72666cddac82404ca7a7b0d48b6742547	Each primary tab selector must have an isolated state machine or hook that forces a clean context clear (unmount or state reset) of the previous step layout upon tab-change click events
	Call Mandatory Validation	Clicking BOOK MY CALL with blank or invalid data must actively intercept the action and show immediate error feedback.	PASS	Working Fine.		The error messages should appear dynamically while typing or as soon as a user leaves a field (onBlur event), rather than delaying feedback until the final button click.
	Name Field Data Type (Call)	The 'Last Name' input field must restrict numeric strings (IFTIKHARI2) and require character-only entities.	FAIL	Not Working Fine.	https://www.loom.com/c/ce822006c7647b58b8ab2e12e922235	Apply a strict alphabetical-only text entry limit regex filter configuration across all active user identity input segments.
	Bottom Green Button Layout	The 'BOOK MY CALL' action trigger container must scale natively and remain fully visible within standard component margins.	PASS	Working Fine.		
	Topic Selection Dropdown State	Selecting a valid category item from the dropdown matrix e.g., Web or Mobile App must immediately resolve validation conditions.	FAIL	Not Working Fine.	https://loom.com/c/64b9c7c672b04d3d8fc291b032c13435	Review the onChange event payload mapping within the custom select component to ensure value keys match backend controller schema fields.
	Verify 'BOOK MY CALL' submit action execution and confirmation data summary parsing.	Submitting valid discovery call requests must successfully trigger the confirmation view layer and display accurate summary variables.	PASS	Working Fine.		None. The functional workflow block maps datasets precisely upon absolute submission triggers.
	Partnership					
	Partnership Mandatory Fields	Submission triggers must intercept incomplete inputs and display accurate, descriptive syntax errors under missing entities.	PASS	Working Fine.		The validation is functionally accurate but should ideally refresh real-time instead of delaying feedback to post-submit.
	Full Name Input Length Constraint	The 'Full Name' input box should enforce a baseline minimum character length constraint e.g., minimum 1-3 characters.	FAIL	Not Working Fine.	https://www.loom.com/c/ce822006c7647b58b8ab2e12e922235	Implement a minimum text string limit attribute restriction (minLength={3}) inside the backend database validation controller framework.
	Top Header Content Clipping	Dynamic validation layout shifts must not push or clip upper paragraph elements past the top viewport boundary frame.	FAIL	Not Working Fine.	https://loom.com/c/607bd2a764de4c158c18abcedc48d0dc	Apply an inner elastic flexbox wrap configuration or permanent vertical scroll track parameters to stabilize layout anchors dynamically.
	Verify dynamic data binding and inline validation clearing upon valid field input selection.	Typing text into input fields or choosing options from dropdown elements must instantly clear the active red validation error text beneath them.	FAIL	Not Working Fine.	https://loom.com/c/607bd2a764de4c158c18abcedc48d0dc	Ensure that the state update function sets the validation error state to false or null immediately on the field's onChange/onInput event handlers.
	Verify SUBMIT action.	Submitting valid discovery call requests must successfully trigger the confirmation.	PASS	Working Fine.		
SERVICES PAGE						
		Clicking Services in the header navbar must trigger a distinct color active state purple highlight to visually anchor the current route layout.	PASS	Working Fine.		None. Perfect layout mapping.
	Navbar Active State Highlights	Clicking the inline purple circle arrows inside the specific cards must accurately redirect users to dedicated service detail breakdowns or initial onboarding setup fields.	PASS	Working Fine.		None. The navigation flow is smooth and direct.
	In-Card Direct Anchor Buttons	Clicking 'START A PROJECT' or 'Schedule a Call' triggers inside the services page layout must initialize the respective global modal entry layers seamlessly.	PASS	Working Fine.		None.
	Start a Project					
	Empty Mandatory Fields	The wizard must block progression to Step 2 and show clear validation highlights under empty required inputs.	PASS	Working Fine.		
	Invalid Email Syntax	Entering an invalid email format (e.g., without '@' or domain) must be caught by system validation.	PASS	Working Fine.		
	Name Field Data Type	The 'First Name' box should only accept alphabetical letters and reject numeric values.	FAIL	Not Working Fine.	https://www.loom.com/c/03e003c2036c24c3682b3649b1855c5dc	
	Verify character acceptance and length constraints for the Company input field.	The field should accept generic alphanumeric company names and strings with minimum character thresholds.	PASS	Working Fine.		
	Verify input masking and syntax character validation for the 'Phone (Optional)' field	The field should strictly reject special symbols '4' typed at the end of the input string and enforce phone number syntax rules.	FAIL	Not Working Fine.	https://www.loom.com/share/f/c58c85f93114cefa8471c57f7c8b88	
	Project Type Tags Selection	The budget/service tags AI, ML, Cloud, Web, Mobile should be interactive and selectable by the user.	FAIL	Not Working Fine.	https://www.loom.com/share/ce1dc55cc5854824ac845abc070ff107	

	Project Budget Dropdown	Clicking the budget dropdown must display a clean, readable list of financial tiers and allow seamless selection.	PASS	Working Fine.		
	Project Description Input	The description textarea must accept alphanumeric inputs, special characters, and enforce a maximum character length limit.	PASS	Working Fine.		
	Project Description Input	The description textarea must accept alphanumeric inputs, special characters, and handle long content strings safely.	PASS	Working Fine.		
	Modal Scroll & Header Scaling	Text expansion inside lower inputs must not distort or crop the layout of preceding elements in the wizard.	FAIL	Not Working Fine.	https://www.loom.com/c27e04d59774658b25a1753761c49fa	
	Budget Range Slider Interactivity	Dragging or clicking the range slider must dynamically update the text threshold value (e.g., \$10K–\$20K) displayed above it.	PASS	Working Fine.		
	Timeline Blocks Selection Logic	The timeline blocks (ASAP, 1-3 Months, etc.) must operate as radio items; selecting one must highlight it and deselect the others.	PASS	Working Fine.		
	How Did You Hear About Us Dropdown	Clicking the reference channel dropdown must expand a readable, functional select option list overlay.	PASS	Working Fine.		
	Verify dynamic budget calculation adjustment based on preferred project timeline selector.	Selecting an urgent timeline (e.g., 'ASAP' / Under 4 weeks') should dynamically scale or apply a premium increase to the Estimated Budget range display.	FAIL	Not Working Fine.	https://www.loom.com/share/83f6b1b2c55649b0865dbd076c2978b7	
	Verify the smoothness, transition easing, and dynamic positioning of the custom purple cursor follower container.	The inner dot must snap perfectly to mouse coordinate matrix paths, and the outer circle should fluidly follow with a slight easing transition delay without stuttering.	PASS	Working Fine.		
	Verify Boundary Value Analysis (BVA) mapping and step increments for the Estimated Budget range slider	The slider must accurately cycle through all defined financial tiers \$1K-\$5K, \$5K-\$10K, up to \$500K step by step without skipping intervals.	PASS	Working Fine.		
	Submit Project Action Execution	Clicking the green 'SUBMIT PROJECT' button with valid datasets must fire the API call and display a clear summary success state.	PASS	Working Fine.		
	Schedule a Call					
	Modal Form Session Reset	Reopening the 'Get Started' modal after closing a successful submission must completely reset the form state to a fresh, blank template.	FAIL	Not Working Fine.	https://www.loom.com/share/b75ad04a0a054b97b025fbc36f33a2cb	
	Custom Cursor Follower Animation	The cursor follower should move synchronously with the mouse pointer to provide a clean and smooth navigation experience.	FAIL	Not Working Fine.	https://www.loom.com/share/0x078cd184ad4cb2a6d79825d69cddd	
	Verify tab switching navigation functionality (Schedule a Call / Partnership) post successful form submission	Clicking alternative tabs after a successful submission must immediately clear the success view and render the respective calendar or partnership input form layouts.	FAIL	Not Working Fine.	https://www.loom.com/share/72660c3d4ae82404ca7a7b0d8b6742547	
	Call Mandatory Validation	Clicking BOOK MY CALL with blank or invalid data must actively intercept the action and show immediate error feedback.	PASS	Working Fine.		
	Name Field Data Type (Call)	The 'Last Name' input field must restrict numeric strings (IFTIKHAR12) and require character-only entries.	FAIL	Not Working Fine.	https://www.loom.com/cce82200fc76d47b58b8ab2ec12e922235	
	Bottom Green Button Layout	The BOOK MY CALL action trigger container must scale natively and remain fully visible within standard component margins.	PASS	Working Fine.		
	Topic Selection Dropdown State	Selecting a valid category item from the dropdown matrix e.g., Web or Mobile App must immediately resolve validation conditions.	FAIL	Not Working Fine.	https://loom.com/f6e4b9c7c672b04d3d8fc291b032c13435	
	Verify 'BOOK MY CALL' submit action execution and confirmation data summary parsing.	Submitting valid discovery call requests must successfully trigger the confirmation view layer and display accurate summary variables.	PASS	Working Fine.		
	Partnership					
	Partnership Mandatory Fields	Submission triggers must intercept incomplete inputs and display accurate, descriptive syntax errors under missing entities.	PASS	Working Fine.		
	Full Name Input Length Constraint	The 'Full Name' input box should enforce a baseline minimum character length constraint e.g., minimum 1-3 characters.	FAIL	Not Working Fine.	https://www.loom.com/cce82200fc76d47b58b8ab2ec12e922235	
	Top Header Content Clipping	Dynamic validation layout shifts must not push or clip upper paragraph elements past the top viewport boundary frame.	FAIL	Not Working Fine.	https://loom.com/f607bd2a764de4c158e18abecd48d0dc	
	Verify dynamic data binding and inline validation clearing upon valid field input selection.	Typing text into input fields or choosing options from dropdown elements must instantly clear the active red validation error text beneath them.	FAIL	Not Working Fine.	https://loom.com/f607bd2a764de4c158e18abecd48d0dc	
	Verify SUBMIT action.	Submitting valid discovery call requests must successfully trigger the confirmation.	PASS	Working Fine.		
	Service page					
	Footer Navigation Anchors	Clicking text index pointers in the footer must redirect to correct pages without throwing 404 errors.	PASS	Working Fine.		None.
	External Social Icons Linkage	Triggering the bottom-right vector blocks (LinkedIn, Instagram, Facebook) must invoke official corporate handles cleanly in a brand new browser window overlay.	PASS	Working Fine.		

	UI Grid Layout Responsiveness	check Responsiveness on iphone 14 pro.	FAIL	Not Working Fine.	https://loom.com/l/1450fda4d81b4da1ae22cae8b85deb09	Set the navbar wrapper to max-width: 100vw and apply overflow-x: hidden to the root HTML body. The mobile hamburger menu should have explicit absolute positioning inside the active viewport bounds so it stays visible without requiring horizontal swiping.
ABOUT US PAGE						
	PARTNER WITH US Modal Invocation	Clicking the purple 'PARTNER WITH US' button beneath the corporate introduction list must instantly trigger the global modal handler onto the 'Partnership' tab layer directly.	PASS	Working Fine.		None. Integration routing looks clean.
	Team Carousel Horizontal Navigation	Clicking the left < and right > chevron arrow vector nodes must horizontally shift team cards smoothly without breaking layouts or freezing container loops.	PASS	Working Fine.		None. The alignment looks clean in standard views.
	Team Profile Hover Link Visibility	Hovering mouse frames over any executive team block should smoothly fade in overlay elements like corporate title tags or direct LinkedIn anchor routes.	FAIL	Not Working Fine.	https://www.loom.com/share/f85ba7230a7a4d7b871fc0809f803ab3	Embed a hover overlay sheet template that brings up a clickable LinkedIn icon vector seamlessly when a user moves their cursor over a card profile.
	Workflow Step Component Integrity	The sequential index steps 01 to 05 inside 'Our Process' must follow accurate timeline tracking strings with strict linear alignments across the vector axis path.	PASS	Working Fine.		
	Partnership					
	Partnership Mandatory Fields	Submission triggers must intercept incomplete inputs and display accurate, descriptive syntax errors under missing entities.	PASS	Working Fine.		
	Full Name Input Length Constraint	The 'Full Name' input box should enforce a baseline minimum character length constraint e.g., minimum 1-3 characters.	FAIL	Not Working Fine.	https://www.loom.com/4/ec822006c76d47b58b8ab2e12e922235	
	Top Header Content Clipping	Dynamic validation layout shifts must not push or clip upper paragraph elements past the top viewport boundary frame.	FAIL	Not Working Fine.	https://loom.com/6/607bf2a764de4c158e18abecde48d0dc	
	Verify dynamic data binding and inline validation clearing upon valid field input selection.	Typing text into input fields or choosing options from dropdown elements must instantly clear the active red validation error text beneath them.	FAIL	Not Working Fine.	https://loom.com/6/607bf2a764de4c158e18abecde48d0dc	
	Verify SUBMIT action.	Submitting valid discovery call requests must successfully trigger the confirmation.	PASS	Working Fine.		
	Start a Project					
	Empty Mandatory Fields	The wizard must block progression to Step 2 and show clear validation highlights under empty required inputs.	PASS	Working Fine.		
	Invalid Email Syntax	Entering an invalid email format (e.g., without '@' or domain) must be caught by system validation.	PASS	Working Fine.		
	Name Field Data Type	The 'First Name' box should only accept alphabetical letters and reject numeric values.	FAIL	Not Working Fine.	https://www.loom.com/5/0e003c2036c24c3682b3649b1855c5dc	
	Verify character acceptance and length constraints for the Company input field.	The field should accept generic alphanumeric company names and strings with minimum character thresholds.	PASS	Working Fine.		
	Verify input masking and syntax character validation for the 'Phone (Optional)' field	The field should strictly reject special symbols '4' typed at the end of the input string and enforce phone number syntax rules.	FAIL	Not Working Fine.	https://www.loom.com/share/fc58c85f93114cefa8741c57f7c8b88	
	Project Type Tags Selection	The budget/service tags AI, ML, Cloud, Web, Mobile should be interactive and selectable by the user.	FAIL	Not Working Fine.	https://www.loom.com/share/ee1de55cc5854824ac845abc070f107	
	Project Budget Dropdown	Clicking the budget dropdown must display a clean, readable list of financial tiers and allow seamless selection.	PASS	Working Fine.		
	Project Description Input	The description textarea must accept alphanumeric inputs, special characters, and enforce a maximum character length limit.	PASS	Working Fine.		
	Project Description Input	The description textarea must accept alphanumeric inputs, special characters, and handle long content strings safely.	PASS	Working Fine.		
	Modal Scroll & Header Scaling	Text expansion inside lower inputs must not distort or crop the layout of preceding elements in the wizard.	FAIL	Not Working Fine.	https://www.loom.com/5/c27e04d59774658b25a1753761c9fa	
	Budget Range Slider Interactivity	Dragging or clicking the range slider must dynamically update the text threshold value (e.g., \$10K-\$20K) displayed above it.	PASS	Working Fine.		
	Timeline Blocks Selection Logic	The timeline blocks (ASAP, 1-3 Months, etc.) must operate as radio items; selecting one must highlight it and deselect the others.	PASS	Working Fine.		
	How Did You Hear About Us Dropdown	Clicking the reference channel dropdown must expand a readable, functional select option list overlay.	PASS	Working Fine.		
	Verify dynamic budget calculation adjustment based on preferred project timeline selector.	Selecting an urgent timeline (e.g., 'ASAP' / Under 4 weeks) should dynamically scale or apply a premium increase to the Estimated Budget range display.	FAIL	Not Working Fine.	https://www.loom.com/share/83fdb1b2c55649b865d8d076c2978b7	
	Verify the smoothness, transition easing, and dynamic positioning of the custom purple cursor follower container.	The inner dot must snap perfectly to mouse coordinate matrix paths, and the outer circle should fluidly follow with a slight easing transition delay without stuttering.	PASS	Working Fine.		
	Verify Boundary Value Analysis (BVA) mapping and step increments for the Estimated Budget range slider	The slider must accurately cycle through all defined financial tiers \$1K-\$5K, \$5K-\$10K, up to \$500K step by step without skipping intervals.	PASS	Working Fine.		
	Submit Project Action Execution	Clicking the green 'SUBMIT PROJECT' button with valid datasets must fire the API call and display a clear summary success state.	PASS	Working Fine.		
	Schedule a Call					

	Schedule a Call					
	Modal Form Session Reset	Reopening the 'Get Started' modal after closing a successful submission must completely reset the form state to a fresh, blank template.	FAIL	Not Working Fine.	https://www.loom.com/share/b75ad04a0a054b97b025fbc36f33a2cb	
	Custom Cursor Follower Animation	The cursor follower should move synchronously with the mouse pointer to provide a clean and smooth navigation experience.	FAIL	Not Working Fine.	https://www.loom.com/share/0c078cd184ad4cb2a6479825dd69cdedd	
	Verify tab switching navigation functionality (Schedule a Call / Partnership) post successful form submission	Clicking alternative tabs after a successful submission must immediately clear the success view and render the respective calendar or partnership input form layouts.	FAIL	Not Working Fine.	https://www.loom.com/share/72660c3d4ae82404ca7a7b0d8b6742547	
	Call Mandatory Validation	Clicking BOOK MY CALL with blank or invalid data must actively intercept the action and show immediate error feedback.	PASS	Working Fine.		
	Name Field Data Type (Call)	The 'Last Name' input field must restrict numeric strings (IFTIKHAR12) and require character-only entries.	FAIL	Not Working Fine.	https://www.loom.com/c/ec82200c76447b58b8ab2e12e922235	
	Bottom Green Button Layout	The BOOK MY CALL action trigger container must scale natively and remain fully visible within standard component margins.	PASS	Working Fine.		
	Topic Selection Dropdown State	Selecting a valid category item from the dropdown matrix e.g., Web or Mobile App must immediately resolve validation conditions.	FAIL	Not Working Fine.	https://loom.com/c/4b9c7c672b04d3d8fc291b032c13435	
	Verify 'BOOK MY CALL' submit action execution and confirmation data summary parsing.	Submitting valid discovery call requests must successfully trigger the confirmation view layer and display accurate summary variables.	PASS	Working Fine.		
ABOUT US PAGE: CORE UTILITIES & FOOTER NAVIGATION						
	Brand Anchor Logo Navigation Identity	Clicking the corporate text/graphic logo inside the header grid system from the /about-us layout must instantly redirect the viewport back to the home root directory path.	PASS	Working Fine.		
	Global Footer Routing Grid Index	Every contextual link pointer structured underneath footer categories (Services, Company, Contact) must link to its dedicated operational application destination path without throwing 404 faults.	PASS	Working Fine.		
	Corporate Footer Social Vector Blocks	Clicking LinkedIn, Instagram, or Facebook bottom tags must safely initialize external brand profile views in fresh browser tab view layers cleanly.	PASS	Working Fine.		
	Team Carousel Mobile Viewport Responsiveness	Restructuring the team view on mobile scale viewports (e.g., iPhone 13 Pro Max) must display a single centered profile card perfectly bounded within \$100\$text(vw)\$. completely masking adjacent track layout elements.	FAIL	Not Working Fine.	https://loom.com/c/c498ca288ab40118cd6adb88d4a48d7	
CLIENT PAGE						
	Testimonial Header Mobile Spacing	Scaling down to mobile responsive dimensions must secure relative padding variables, rendering title blocks with tight, visually balanced vertical layout gaps.	FAIL	Not Working Fine.	https://loom.com/c/af69650abac44696b6ece9f1485260f8	
	Testimonial Card Static Grid Layout	The client testimonial feedback cards must render properly spaced with 5-star rating icon alignments intact across desktop viewports.	PASS	Working Fine.		
	Corporate Metric Counter Assets	Numeric milestone strings (98+, 95%, 2+) must load perfectly inside their grid segments without text truncation or alignment offsets.	PASS	Working Fine.		
	Bottom Banner CTA Popups	Clicking 'START A PROJECT' or 'Schedule a Call' button chips must trigger their respective form tabs within the global onboarding popup matrix.	PASS	Working Fine.		
	Brand Header Identity Return Path	Clicking the 'Ditech Offerings' text/logo element from the /clients route must instantly return user session focus to the root main landing directory.	PASS	Working Fine.		
	Social Anchor Network Handlers	Triggering external brand vectors (LinkedIn, Instagram, Facebook) must request execution inside unique standalone window instances securely.	PASS	Working Fine.		
Start a Project button						
	Empty Mandatory Fields	The wizard must block progression to Step 2 and show clear validation highlights under empty required inputs.	PASS	Working Fine.		
	Invalid Email Syntax	Entering an invalid email format (e.g., without '@' or domain) must be caught by system validation.	PASS	Working Fine.		
	Name Field Data Type	The 'First Name' box should only accept alphabetical letters and reject numeric values.	FAIL	Not Working Fine.	https://www.loom.com/c/0c003c2036c24c3682b3649b1855c5dc	
	Verify character acceptance and length constraints for the Company input field.	The field should accept generic alphanumeric company names and strings with minimum character thresholds.	PASS	Working Fine.		
	Verify input masking and syntax character validation for the Phone (Optional) field	The field should strictly reject special symbols '4' typed at the end of the input string and enforce phone number syntax rules.	FAIL	Not Working Fine.	https://www.loom.com/share/fc58c85f93114ecfa18471c5777c8b88	
	Project Type Tags Selection	The budget/service tags AI, ML, Cloud, Web, Mobile should be interactive and selectable by the user.	FAIL	Not Working Fine.	https://www.loom.com/share/cc1dc55cc5854824ac84sub070ff107	
	Project Budget Dropdown	Clicking the budget dropdown must display a clean, readable list of financial tiers and allow seamless selection.	PASS	Working Fine.		

	Project Description Input	The description textarea must accept alphanumeric inputs, special characters, and enforce a maximum character length limit.	PASS	Working Fine.		
	Project Description Input	The description textarea must accept alphanumeric inputs, special characters, and handle long content strings safely.	PASS	Working Fine.		
	Modal Scroll & Header Scaling	Text expansion inside lower inputs must not distort or crop the layout of preceding elements in the wizard.	FAIL	Not Working Fine.	https://www.loom.com/5/c27c04d59774658b25a1753761cd9fa	
	Budget Range Slider Interactivity	Dragging or clicking the range slider must dynamically update the text threshold value (e.g., \$10K-\$20K) displayed above it.	PASS	Working Fine.		
	Timeline Blocks Selection Logic	The timeline blocks (ASAP, 1-3 Months, etc.) must operate as radio items; selecting one must highlight it and deselect the others.	PASS	Working Fine.		
	How Did You Hear About Us Dropdown	Clicking the reference channel dropdown must expand a readable, functional select option list overlay.	PASS	Working Fine.		
	Verify dynamic budget calculation adjustment based on preferred project timeline selector.	Selecting an urgent timeline (e.g., 'ASAP' / Under 4 weeks) should dynamically scale or apply a premium increase to the Estimated Budget range display.	FAIL	Not Working Fine.	https://www.loom.com/share/83f6b1b2c55649b865dbd076c2978b7	
	Verify the smoothness, transition easing, and dynamic positioning of the custom purple cursor follower container.	The inner dot must snap perfectly to mouse coordinate matrix paths, and the outer circle should fluidly follow with a slight easing transition delay without stuttering.	PASS	Working Fine.		
	Verify Boundary Value Analysis (BVA) mapping and step increments for the Estimated Budget range slider	The slider must accurately cycle through all defined financial tiers \$1K-\$3K, \$3K-\$10K, up to \$500K step by step without skipping intervals.	PASS	Working Fine.		
	Submit Project Action Execution	Clicking the green 'SUBMIT PROJECT' button with valid datasets must fire the API call and display a clear summary success state.	PASS	Working Fine.		
	Schedule a Call button					
	Modal Form Session Reset	Reopening the 'Get Started' modal after closing a successful submission must completely reset the form state to a fresh, blank template.	PASS	Working Fine.		
	Call Mandatory Validation	Clicking BOOK MY CALL with blank or invalid data must actively intercept the action and show immediate error feedback.	PASS	Working Fine.		
	Name Field Data Type (Call)	The 'Last Name' input field must restrict numeric strings (IFTIKHAR12) and require character-only entries.	FAIL	Not Working Fine.	https://www.loom.com/5/ec82200fc764d7b58b8ab2c12e922235	
	Bottom Green Button Layout	The BOOK MY CALL action trigger container must scale natively and remain fully visible within standard component margins.	PASS	Working Fine.		
	Topic Selection Dropdown State	Selecting a valid category item from the dropdown matrix e.g., Web or Mobile App must immediately resolve validation conditions.	FAIL	Not Working Fine.	https://loom.com/5/c4b9c7c672b04d3d8fc291b032c13435	
	Verify 'BOOK MY CALL' submit action execution and confirmation data summary parsing.	Submitting valid discovery call requests must successfully trigger the confirmation view layer and display accurate summary variables.	PASS	Working Fine.		
CONTACT US PAGE						
	Embedded Form Functional Vulnerabilities	Since the global component is embedded here, checking empty validations or text-masking inputs must mimic identical system bugs logged earlier	FAIL	Not Working Fine.	https://loom.com/5/283320505ec54ccf96e89aa70c3c8bd7	Apply the core validation schema configurations and regular expressions component universally across both standalone popup overlays and hard-coded embedded route modules.
	Embedded Form Functional Data Integrity & Validation Syntax Regex Constraints	he embedded interface validation parser must apply strict, clean validation frameworks uniformly across all inputs. It must reject alphanumeric values in name rows, bar special symbols from phone numbers, and use standard checks to block broken syntactic structures e.g., a@.com from advancing the user session to Step 02.	FAIL	Not Working Fine.	https://www.loom.com/share/0d97ca9b0040411bd9b0d6278f1a7a1ac	Implement a globally integrated schema validation model
	Embedded Form Tab Persistence	Interacting with tab switches directly inside the mobile page view must toggle input fields natively without freezing state controllers.	FAIL	Not Working Fine.	https://www.loom.com/share/bd999527050641b984b1db337dd525b2	
	Core Contact Page Responsiveness	Lowering screen constraints down to target handheld mobile dimensions must neatly shift the layout into a structured vertical single-column block format.	FAIL	Not Working Fine.	https://www.loom.com/share/c02533992f83479fae646a491a7c270c	
	Mailto Link Anchor Execution	Clicking active corporate email addresses hello@digitechofferings.com underneath the Email Us left card module must instantly call native system mail clients.	PASS	Working Fine.		
	Tel Protocol Integration	Activating corporate dial values +92 308 1988801 from mobile context views or desktop click triggers must fire device telephony prompt requests.	PASS	Working Fine.		
	Start a Project					
	Empty Mandatory Fields	The wizard must block progression to Step 2 and show clear validation highlights under empty required inputs.	PASS	Working Fine.		
	Invalid Email Syntax	Entering an invalid email format (e.g., without '@' or domain) must be caught by system validation.	PASS	Working Fine.		
	Name Field Data Type	The 'First Name' box should only accept alphabetical letters and reject numeric values.	FAIL	Not Working Fine.	https://www.loom.com/5/0e003c2036c24e3682b3649b1855c5dc	
	Verify character acceptance and length constraints for the Company input field.	The field should accept generic alphanumeric company names and strings with minimum character thresholds.	PASS	Working Fine.
